PROFESSIONAL SUMMARY

Data Engineer with 2 years of hands-on experience turning messy, manual data processes into reliable, automated systems — from ETL pipelines and validation engines to Power BI dashboards that business teams actually use. Cut data validation time by 70% and ad-hoc reporting requests by 40% by building tools that let non-technical stakeholders self-serve trustworthy data, without needing to touch a database directly. Comfortable across the full data stack — SQL Server, PostgreSQL, MySQL, Python, and Power BI — and now growing into .NET microservices and backend API development. Drawn to messy, ambiguous data problems and the satisfaction of turning them into clean, dependable systems people rely on every day.

TECHNICAL SKILLS

Programming Languages: Python (Pandas, NumPy, openpyxl, xlswriter), SQL, T-SQL, C#

Data Engineering: ETL/ELT Pipeline Development, Data Transformation, Data Validation & Quality, Pipeline Automation, Data Cleansing, Schema Design, Batch Processing, Data Reconciliation

Databases: SQL, SQL Server, MySQL, PostgreSQL, SQLite

Data Modeling & Warehousing: Star Schema, Dimensional Modeling, Fact and Dimension Tables, Data Warehousing, Data Architecture

Business Intelligence & Analytics: Power BI (DAX, Power Query, Report Design), KPI Dashboard Development, Data Visualization, Statistical Analysis, Exploratory Data Analysis, Advanced Excel

Backend & APIs: .NET / ASP.NET Core Web API, C#, Entity Framework Core (Code-First, Migrations), REST API Development, Microservices Architecture, Clean Architecture

Tools & Platforms: Git, GitHub, FastAPI, Flask, Postman

PROFESSIONAL EXPERIENCE

Matisaar Technologies | Software Engineer | Pune, India

Apr 2026 – Present

- Build the Recruitment service for a hiring platform on .NET microservices — using Clean Architecture, EF Core migrations, and a relational schema for candidates, applications, and documents to keep the codebase maintainable and hiring data traceable.
- Own the full campus hiring workflow — job postings, candidate applications, screening questions, and campus/department management — from posting a role through shortlisting candidates.
- Integrate AI-powered resume parsing that reads uploaded resumes and auto-fills candidate profiles, cutting manual data entry for recruiters.
- Set up API Gateway routing and JWT authentication with refresh tokens, giving every service one secure, consistent login and access-control layer.
- Build the public career portal candidates use to browse and apply for open roles, plus a recruiter dashboard that surfaces hiring pipeline metrics at a glance.
- Build an AI-powered mock interview platform (FastAPI) that generates interview questions from a resume and job description, scores answers in real time, and produces a feedback report — with built-in speech-to-text/text-to-speech and automatic fallback between AI providers for reliability.
- Roll out an embeddable BI chatbot widget with configurable table-level access controls, automatic fallback across multiple AI providers, and support for MySQL, SQL Server, and PostgreSQL — strictly read-only by design, so any embedding client gets safe self-serve answers in English, Hindi, Marathi, or Hinglish.

ERlate Labs Pvt. Ltd. | Data Engineer | Pune, India

Oct 2024 – Mar 2026

- Built Python ETL pipelines for operational datasets with schema and completeness checks, cutting downstream reporting errors and keeping every run audit-traceable.
- Automated data validation with Python and Pandas, checking 10,000+ data points per run against reference files — replaced a manual Excel review process and cut validation time by about 70%.
- Modeled a star schema across orders, customers, products, and transactions for faster queries and consistent reporting across teams.
- Delivered Power BI dashboards with 8+ DAX measures for revenue, margins, and regional performance, cutting ad-hoc reporting requests by about 40%.
- Built a natural-language-to-SQL tool supporting English, Hindi, Marathi, and Hinglish, letting non-technical stakeholders query live data safely without direct database access.
- Wrote optimized, cross-database SQL (SQL Server, MySQL, PostgreSQL) and automated Power Query cleanup, reducing manual reconciliation and data-prep effort for the reporting team.
- Profiled datasets before ingestion to catch nulls, duplicates, and schema issues early — fixing data quality problems at the source before they hit reporting.

PROJECTS

Recruitment & Workforce Management Platform — .NET Microservices

C#, ASP.NET Core, Entity Framework Core, Ocelot API Gateway, JWT, SQL Server, Clean Architecture

- Built the Recruitment module of a multi-service workforce management platform — covering job posting management, multi-campus/department hierarchies, candidate applications, screening questions, and document uploads, structured with Clean Architecture across Domain, Application, Infrastructure, and API layers.
- Served as backend developer for the Recruitment service, owning the domain model, EF Core migrations, and REST API surface, and integrating it with the platform's centralized API Gateway and Auth service.
- Integrated an AI-assisted resume parsing pipeline that extracts structured candidate details from uploaded resumes and pre-populates candidate profiles — removed manual data entry from the recruiter workflow and standardized incoming candidate data.
- Implemented gateway-level routing and JWT-based bearer authentication with refresh tokens across services — enforced consistent, centralized access control instead of per-service auth logic.
- Delivered a public career portal (campuses, departments, live job postings) and an internal dashboard summarizing recruitment pipeline metrics — gave recruiters a single view of hiring activity and candidates a self-service way to browse and apply to open roles.

Sales & Profit Analytics Dashboard

SQL, Power BI, DAX, Power Query, Star Schema, Dimensional Modeling, Excel

- Designed a star schema data model integrating four source domains — customers, orders, products, and payments — into a clean analytical layer optimized for Power BI reporting and business self-service analysis.
- Built 8+ DAX measures covering year-over-year revenue comparison, gross margin percentage, regional contribution breakdown, and top-N product performance — enabled business users to answer most standard reporting questions without analyst involvement.
- Designed the full report layout with drill-down capability, cross-filter slicers, and geographic performance maps — stakeholders can explore data by time period, region, product category, and customer segment from a single dashboard view.
- Automated data preparation in Power Query — cleaned inconsistent date formats, standardized product category names, removed null records, and enabled scheduled refresh, reducing manual data preparation effort and improving report reliability.

Automated Data Validation & Quality Audit System

Python, Pandas, NumPy, Flask, openpyxl, xlswriter, SQL, REST API, JSON

- Designed and built a structured data validation system comparing two versions of a dataset across 10,000+ records per run — classifies each record as Exact Match, Mismatch, or Default Value, replacing a fully manual Excel process and cutting QA cycle time by approximately 70%.
- Implemented a persistent annotation layer allowing data engineers to document reasons for accepted discrepancies — annotations survive system restarts and re-uploads, maintaining a continuous data quality audit trail without re-entry.
- Built a multi-sheet Excel report generator using in-memory file streams — delivers source dataset, reference dataset, and comparison results in one downloadable file, providing a clean audit trail for data quality and change management reviews.
- Exposed validation operations via a REST API, enabling integration with upstream data pipelines and scheduled automated validation runs without manual triggering.

EDUCATION

MSc in Data Science | *Dr. D. Y. Patil College, Pune*

2022 – 2024

CGPA: 9.5

BSc in Statistics | *Moolji Jaitha College, Jalgaon*

2019 – 2022

CGPA: 8.57

CERTIFICATIONS

- **Google Data Analytics Professional Certificate** — Coursera
- **Microsoft Power BI** — Infosys
- **Python for Data Science** — Infosys
- **SQL & Database Fundamentals** — Infosys
